

See clearly with MetaLark.ai

The award-winning “Content Intelligence Toolkit”
for analyzing and diagnosing your entire content library.

You wouldn't schedule surgery without imaging the patient first. So why are you making high-dollar decisions about your L&D strategy without scanning what's actually inside your content library? MetaLark is the Digital MRI for your content ecosystem — scanning, analyzing, and providing a full diagnostic report on every asset you own.

HOW THE SCAN WORKS

01**INGEST**

Connect your LMS, Google Drive, MS SharePoint, AWS S3, or drag & drop files directly into MetaLark

02**SCAN & DIAGNOSE**

ML parsing engine deconstructs every asset; AI generates metadata, maps skills & builds a full diagnostic report

03**PRESCRIBE & DEPLOY**

Apply the Four Rs, then export to a new LMS, enterprise LLM, or authoring tool — AI-ready and skills-aligned

THE FOUR R'S: YOUR CONTENT DIAGNOSTIC REPORT

RETAIN

*Healthy —
No Action Is Needed*

High-value, accurate, evergreen content confirmed in excellent condition — deploy with confidence

REFRESH

*Treatable —
Targeted Intervention*

Relevant content showing signs of age — the scan identifies which items need updating and where

RETIRE

*Inoperable —
Scheduled for Removal*

Outdated or redundant content — remove to reduce risk, clutter, and compliance exposure

REUSE

*Repurpose —
Transplant Ready*

Strong assets with untapped potential — reimagine for new audiences, formats, and contexts

Most L&D teams are so focused on creating new content that they overlook a far more Immediate opportunity: the vast library of learning assets already sitting in their LMS and cloud repositories. Before you can build an AI-ready learning ecosystem, you need to know what you already have – and that requires a fundamentally different approach to content strategy.

KEY DIAGNOSTIC CAPABILITIES

- ✓ AI-generated rich metadata, titles & descriptions in seconds
- ✓ Full-text searchable content encyclopedia across all assets
- ✓ Skills inference & mapping to ESCO or customer ontologies
- ✓ Auto-generated summaries with overview and key takeaways
- ✓ AI-generated assessments and question banks
- ✓ Cross-domain content organization from multiple sources, with status & action markers
- ✓ Embedded Content Player for immediate review & clarity

SUPPORTED FORMATS & INTEGRATIONS

Document & Media

- PDF & HTML pages
- Microsoft Word (.docx and .rtf)
- Microsoft PowerPoint (.pptx)
- Image Files (JPG, PNG and others)
- Rich Media Video & Audio files (MP4, MP3 and others)
- VTT / Transcript files

eLearning Packages

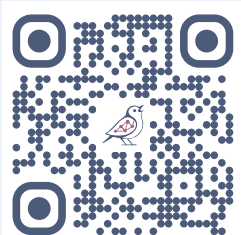

- SCORM 1.2 & 2004
- xAPI
- cmi5

Authoring Tools

- Articulate Rise, Storyline
- Domiknow Claro
- iSpring Suite
- Adobe Captivate
- ELB Lectora
- Gomo
- Adapt Builder
- Custom

Integration & Standards

- LMS / LXP via API
- SharePoint, Google Drive, AWS S3
- ESCO Skills Ontology mapping
- Custom Tags & Skills Taxonomies
- SSO / Enterprise authentication
- AWS-hosted cloud infrastructure
- SOC 2 certified
- Agentic AI Agents via API & MCP
